What You Think AI Is...

What It Actually Is

Clearing up the confusion around
Artificial Intelligence.

Yagnik Narola
python programmer

AI = Machines that Think & Learn

- **Mimics human intelligence**
- **Learns from data**
- **Solves tasks like recognizing speech, making decisions, etc.**

 **Not just code. It adapts.**

Where You Already Use AI

- Siri, Alexa – Voice Assistants
- Netflix – Recommendations
- Gmail – Smart Compose
- LinkedIn – Job Suggestions

 AI is quietly everywhere.

Why AI is a Big Deal

- **Saves time**
- **Boosts productivity**
- **Enables automation**
- **Creates smarter tools for humans**

⚙️ **It's not replacing us — it's augmenting us.**
